数据接口 - 约定

请求方法

"Method": "GET"

- GET【查】获取
- POST【增】提交
- PUT【改】更新
- DELETE 【删】删除

请求内容类型及数据格式

"Content-Type": "application/json"

```
{
    "Status": "",
    "Position": "",
    "ErrorCode": "",
    "Data": [
        {},
        {},
        {},
        {},
        {},
        {},
        {},
        {},
        {},
        {},
        {},
        {},
        {},
        {},
        {},
        {},
        {},
        {},
        {},
        {},
        {},
        {},
        {},
        {},
        {},
        {},
        {},
        {},
        {},
        {},
        {},
        {},
        {},
        {},
        {},
        {},
        {},
        {},
        {},
        {},
        {},
        {},
        {},
        {},
        {},
        {},
        {},
        {},
        {},
        {},
        {},
        {},
        {},
        {},
        {},

        {},
        {},
        {},
        {},
        {},
        {},
        {},
        {},
        {},
        {},
        {},
        {},
        {},
        {},
        {},
        {},
        {},
        {},
        {},
        {},
        {},
        {},
        {},
        {},
        {},
        {},
        {},
        {},
        {},
        {},
        {},
        {},
        {},
        {},
        {},
        {},
        {},
        {},
        {},
        {},
        {},
        {},
        {},
        {},
        {},
        {},
        {},
        {},
        {},
        {},
        {},
        {},
        {},
        {},
        {},
        {},
        {},
        {},
        {},
        {},
        {},
        {},
        {},
        {},
        {},
        {},
        {},
        {},
        {}
```

请求携带信息 - Request Headers

Cookie (产品环境)

- token: "登录信息(加密,服务端使用)
- isAuthenticated: true/false 是否认证(客户端使用)

接口形式

- /服务/方法(/productApp/linkService, GET, POST)√
- /服务/方法/查询值/查询值(/productApp/linkService/val1/val2, GET, PUT, DELETE)
- /服务/方法?查询字符串&查询字符串(/productApp/linkService?arg1=val1&arg2=val2, GET)√

HTTP 状态码(3位) + 代码位置编码(4位) + 具体错误编码(3位)

- HTTP 状态码
 - 。 主要为 5xx 的服务器错误状态码
- 代码位置编码
 - 。 前两位代表服务位置,后两位代表方法位置
- 具体错误编码
 - 。 前一位代表业务线编码
 - 。 后两位代表具体业务错误编码

eg: 5000101001

```
{
    "Status": "500",
    "Position": "0101",
    "ErrorCode": "001",
}
```

Fetch 配置

```
// ./utils/FL.js
FETCH: {
    GET: {
        method: 'GET',
        headers: {
            'Content-Type': 'application/json'
        },
        credentials: 'same-origin',
    },
    POST: {
        method: 'POST',
        headers: {
            'Content-Type': 'application/json'
        credentials: 'same-origin',
    },
    FORM: {
        method: 'POST',
        headers: {
            'Content-Type': 'application/x-www-form-urlencoded'
        credentials: 'same-origin',
    },
},
```

Fetch 请求

```
import { FL } from './utils/FL'
import fetch from 'isomorphic-fetch'
// GET 请求
fetch('/productApp/linkService', FL.FETCH.GET).then(function (response) {
    response.json();
}).catch(function (error) {
    console.log(error);
});
// POST 请求
fetch('/productApp/linkService?name=kamen&id=1', {
    ...FL.FETCH.POST,
    body: JSON.stringify(data)
}).then(function (response) {
    response.json();
}).catch(function (error) {
    console.log(error);
});
// POST 请求 (表单)
fetch('/productApp/linkService?name=kamen&id=1', {
    ...FL.FETCH.FORM,
    body: JSON.stringify(data)
}).then(function (response) {
    response.json();
}).catch(function (error) {
    console.log(error);
});
```
